Add new product

Product ID

Enter product ID

Product Name

Enter product name

Target Weight

Enter target weight

CSV File

Choose File   No file chosen

Submit

Any CSV file with the column *cooking_weight_difference* works. CSV file is to compute the upper and lower bound of cooking weight loss

Stage 1

Batch Id

Enter batch Id

Product Id

Enter product Id

Production Time

yyyy-mm-dd

Weight Before Cooking (kg)

Enter weight before cooking in kg

Enter weight before cooking in kg

Fill your data from phase 1 to phase 4. Remember to keep Batch Id and Production time consistence. Product Id must be a valid one that you created before

No notifications available for this product

10:04 · 10/11 | Batch: #1111 · 10/11 | Storage weight deviation: -23%

10:03 · 10/11 | Batch: #1111 · 10/11 | Cooking weight loss: 20.00kg

10:01 · 10/11 | Batch: #0002 · 10/11 | Cooking weight loss: 20.00kg

09:56 · 10/11 | Batch: #0002 · 10/11 | Storage weight deviation: -1%

09:55 · 10/11 | Batch: #0002 · 10/11 | Cooking weight loss: 20.00kg

As you fill the data, the monitoring screen will update automatically. Each abnormal behavior will be notified via notification
